

## fern-print dresser

1 Select a clip art image with a solid outline (we chose a fern frond). 2 Using a photo-editing program, darken the image so that it has a clearly defined outline. 3 Print the image on decal paper according to the directions on the package. 4 With a utility knife, cut out the shape of the image from the decal paper to make a stencil. 5 Peel the stencil from the adhesive backing and adhere to surface (if recently painted, ensure paint has fully cured – at least one week). 6 Paint using a foam stencil brush and stencil paints. We used four different shades of green and mixed some for additional custom colours. ▷
